Problem

In a multinational pharmaceutical company producing more than 150 formulations, there was a lot of untapped capacity on the shop floor which was unnoticed to the production team.

Diagnosis

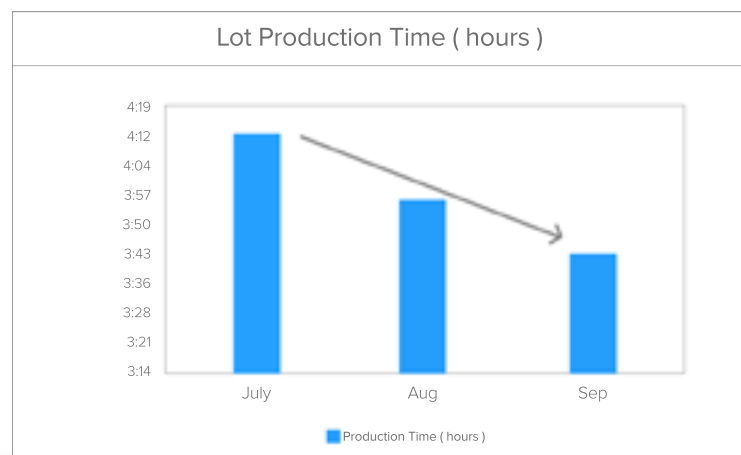

Implementation of IPF system allowed the management to observe unnecessary stoppages that increased lot time.

Action

Post implementation, the production time per lot reduced by 14%.

Impact

IPF system enabled production team to minimize its potential loss by INR 87 lacs within 2 months just by 'highlighting' the stoppages time in between the process impacting its profitability.
